

Documentation

1. We suggest using Linear color space which can be found from (Edit>Project>Settings>Players).
2. If you do not have post processing installed, we suggest install it from (Window>Package Manager). Click the All button and select "Post processing". After that, click the Install button.
3. Because all the VFX are particles based, you can change the original texture image or change how the particles are moving to suit your specific needs. With the help of these particles based VFX, you can make your asset or environment more dynamic and beautiful.
4. Here are the custom shaders that we use in this package.

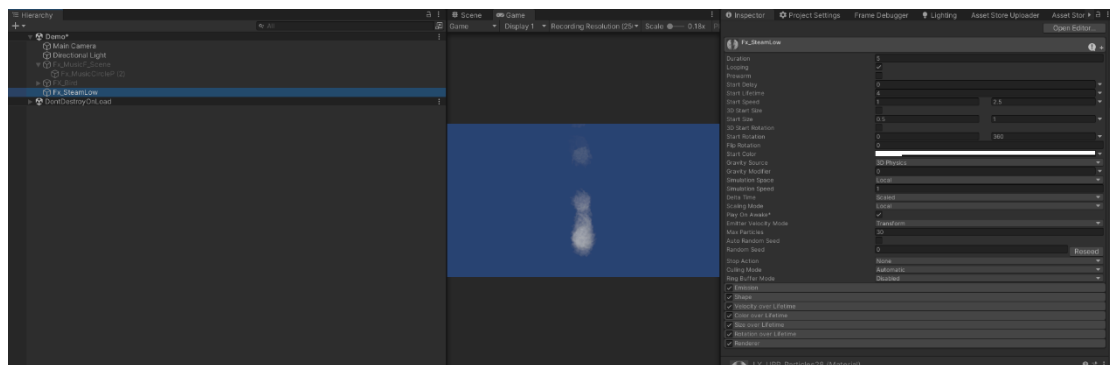

The number of the flying birds could be changed by changing the max particles.

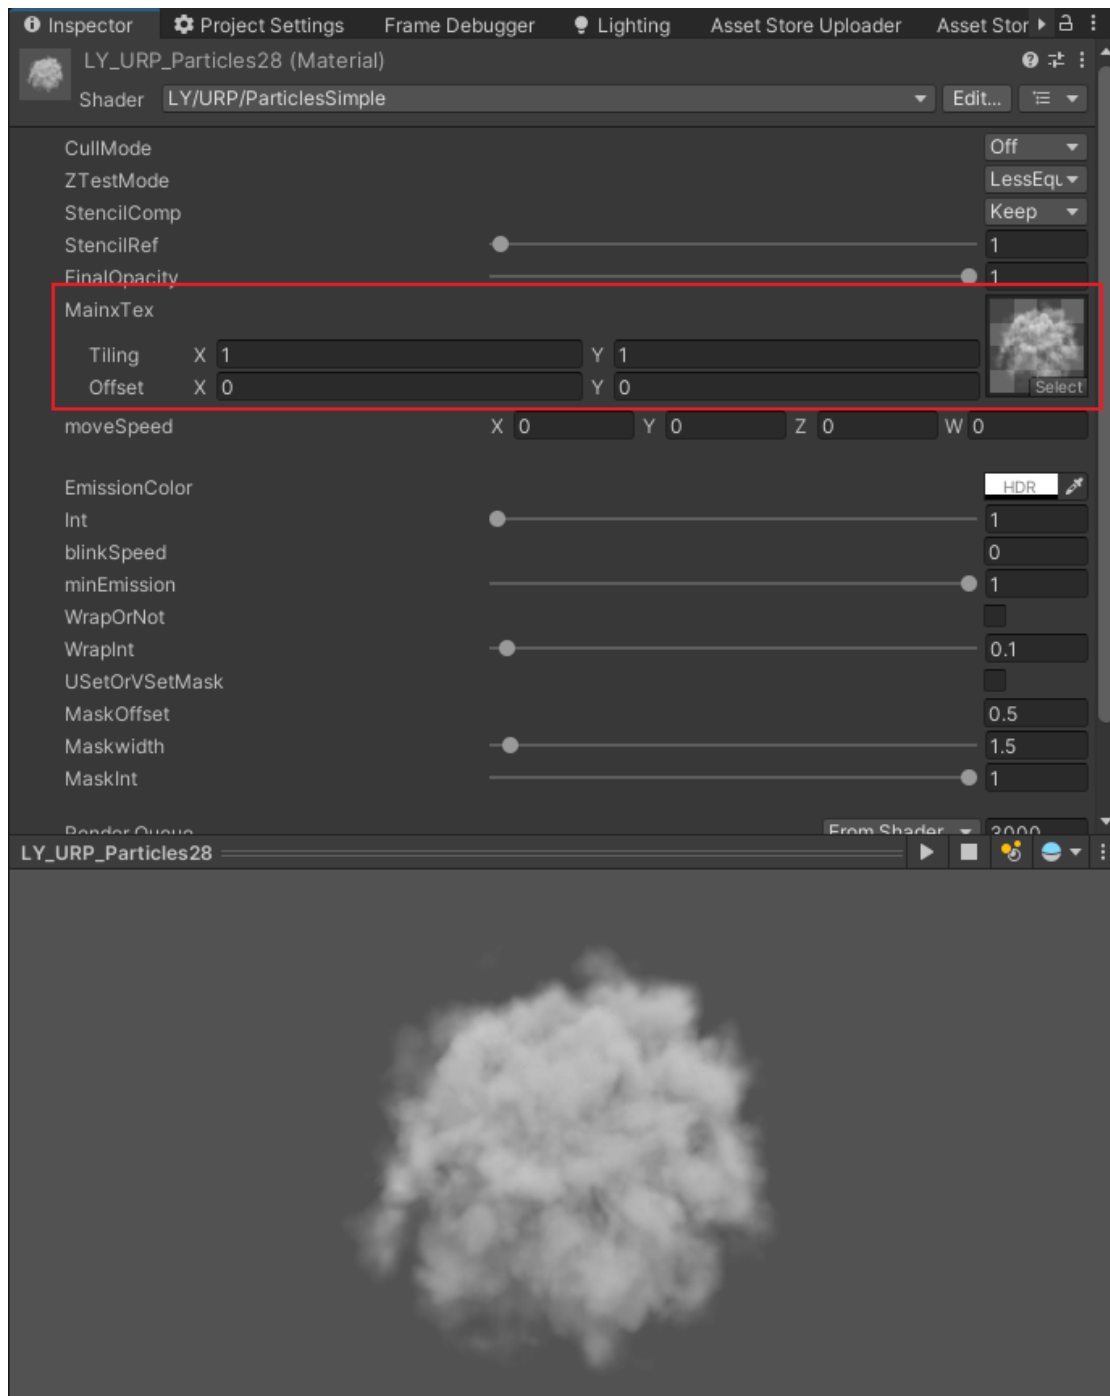

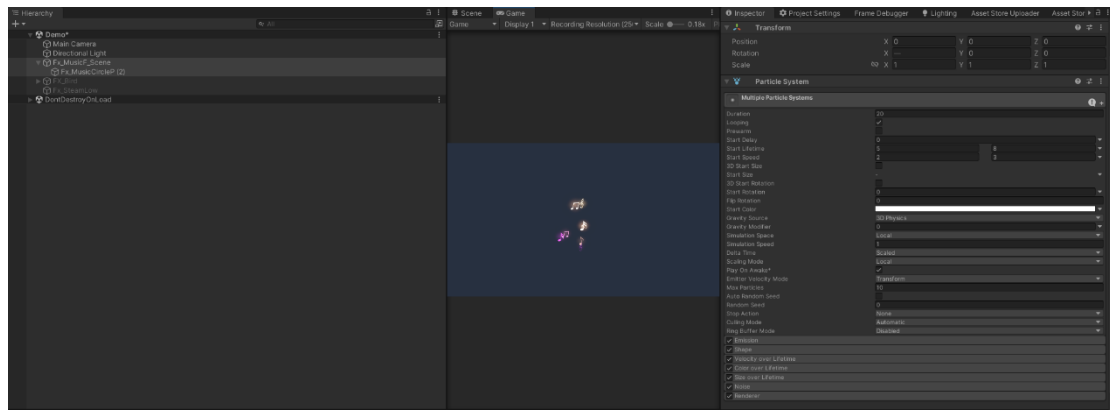

The original flying birds texture can be changed here to suit your specific needs.

The amount of the smoke could be changed by changing the max particles.

The original smoke texture can be changed here to suit your specific needs.

The number of the music notes could be changed by changing the max particles.

The original music notes texture can be changed here to suit your specific needs.
